Notes: * Special topics, seminar and directed studies courses will be acceptable to meet sustainability certificate requirements if topic is determined to be applicable by the Academic Coordinator – Sustainability Studies.

Courses were included or excluded in the curriculum inventory based on definitions provided by the Association for the Advancement of Sustainability in Higher Education (AASHE) for the Sustainability Tracking, Assessment & Rating System (STARS). Definitions are provided below.

AASHE defines sustainability courses as those in which the primary and explicit focus is on sustainability and/or on understanding or solving one or more major sustainability challenge.

AASHE define courses that include sustainability (sustainability-related courses) as those with a primary focus on a topic other than sustainability, but incorporate a unit, module or activities on sustainability or a sustainability challenge.

Extended definitions can be found at the following link:

http://www.aashe.org/files/documents/STARS/2.0/stars_2.1_technical_manual_-_administrative_update_two.pdf

Graduate level courses were removed from the certificate list as the certificate program is designated for undergraduate students.

Courses in programs such as Education, Nursing, Undergraduate Medical Education, Social Work, and Law where the program is very prescriptive and access to students outside of the program is extremely limited were removed (except SOWK 557) from the certificate inventory, as students in these programs are unable to take the certificate program and the courses in the department would not benefit external students.
