#### **Official Course Description (GEOG 436)**

Field research and reconnaissance survey techniques. Individual and group travel-study combined with formal instruction and seminars.

#### **Course Objectives**

Ecocriticism is a 20<sup>th</sup> century approach that allows us to think about the relationships between texts and environment. From the perspective of the ancient Mediterranean world, ecocriticism has provided ways to analyze how individuals engaged with nature and the “environment.” While a large proportion of these relationships are navigated through ancient texts, we are now turning towards material culture as a further means to understand these viewpoints. By visiting select sites in the ancient Mediterranean and analyzing their material remains we can begin to understand how the ancients engaged with their “environment” and in turn contributed to economic decision-making.

#### **Course Learning Outcomes**

Upon successful completion of this course, students will be able to:

1. Analyze and develop an appreciation for landscape and environment in the ancient world based on evidence that exists in modern contexts
2. Think critically about how scholars have traditionally approached the environment and how this may contribute to economic decision-making in select ancient Mediterranean cultures.
3. Learn how to fine tune our own modern perceptions about nature, environment, human, non-human against those of the ancients
4. Develop an appreciation for reading and understanding scholarly literature

**Prerequisites:** No prerequisites required
